

Scale POC 10k → FULL 116k · ViT-G — does surgery's separation from the best competitor survive the 12x data jump?
(same encoders both sides · each panel sorted best→worst · green past dashed = separated win · surgery_raw ∈ OURs · FULL panel matches forest_plot_best_ci)

ViT-G · FULL 116k (n_test = N/A — no full-scale eval yet)
